now give me the commads to run this when ever i want

To run your app smoothly whenever you want, here are the essential commands in order for your workflow, assuming your setup is ready:

1. Start the local blockchain node (Hardhat)

Run this in a terminal and keep it running:

```
npx hardhat node
```

2. Deploy/redeploy smart contracts (if needed)

In another terminal, run:

```
truffle migrate --config ./truffle-config.cjs --network development
```

Use this only when you want to deploy or redeploy contracts.

3. Generate Tourist ID from Aadhaar number

Run your Node.js script, passing Aadhaar number and validity days, for example:

```
node scripts/generateIDFromAadhaar.cjs 123412341234 365
```

Replace Aadhaar number and days as needed.

4. Retrieve Tourist ID details

Create a script `scripts/getTouristDetails.cjs` (or similar) containing your retrieval code. Run:

```
node scripts/getTouristDetails.cjs
```

(Make sure to set tourist and police addresses inside the script or pass as arguments.)

Optional: Streamlined npm scripts (in `package.json`)

Add this section to your `package.json` for easy commands:

```
"scripts": {
  "start-node": "npx hardhat node",
  "migrate": "truffle migrate --config ./truffle-config.cjs --network development",
  "generate-id": "node scripts/generateIDFromAadhaar.cjs",
  "get-id": "node scripts/getTouristDetails.cjs"
}
```

Then you can run:

```
npm run start-node
```

```
npm run migrate
```

```
npm run generate-id -- 123412341234 365
```

```
npm run get-id
```

Let me know if help is needed to create the retrieval script or set up the npm scripts!
